

COMING SOON TO METUCHEN...

New Western Transmission Main To Provide Supplemental Water Delivery and Ensure Resiliency

*New Supplemental Water Main Being Constructed
in Edison and Metuchen*

The Western Transmission Main project is part of Middlesex Water Company's \$160 million infrastructure investment initiative, "Water for Tomorrow®" designed to strengthen water distribution infrastructure and help ensure greater reliability, safety and service quality now and for the future.

Middlesex Water Company will be constructing an underground large diameter water transmission main from Edison Township to the Borough of Metuchen through your area. Over the years, demands on the Company's transmission mains have increased and their importance has grown more critical. This main is being built to supplement an existing main and mitigate risks associated with aging infrastructure. **This project is expected to begin in April 2018 and continue through 2020.** Neighborhoods will likely see construction for several weeks at a time as the pipeline installation progresses. The project route will include Jersey Avenue in Metuchen to Cedar Lane in Edison. Road excavation work is expected to result in temporary road closures and traffic detours but we will strive to minimize inconvenience wherever possible. We thank you for your patience, cooperation and understanding throughout this important infrastructure improvement effort.

Check for project updates including construction status, road closures, traffic detours and other information on our project website at
